

Specifier's Guide: Polished Concrete & Terrazzo

Enhance and seal

Fully breathable impregnating enhancer enriches the color of polished concrete and provides premium oil and water repellence. Dry-Treat enhancers do not form a coating like traditional enhancers and do not yellow, whiten, crack or peel. After a few years when the enhancement starts to fade, simply clean and recoat, with no stripping required.

Etch polished concrete

Powerful, safe acid for opening the pores of densified concrete prior to coloring.

Product	Used for
Eff-Erayza™ Powerful, safer acid cleaner	<ul style="list-style-type: none"> • Etching densified concrete to open up the pores of prior to coloring

HANAFINN™ Eff-Erayza

* Eff-Erayza has a slower reaction speed than muriatic acid, making it easier to control. However, it is still important to neutralize Eff-Erayza as soon as possible after the etching treatment.

Note: EFF-ERAYZA™ is acidic / corrosive and will etch and pit acid sensitive surfaces such as marble, limestone, travertine, some concrete / grout products and some metals including aluminium. Do not allow product to come in contact with any non-recommended surface.

For coverage rates please refer to the Product Coverage Guide to calculate the amount of product required.
